- **Portfolio:** <https://nicohermida.vercel.app/>
- **Location:** Buenos Aires, Argentina

## Professional Profile

Junior fullstack developer currently pursuing a university degree. I'm confident working in both frontend and backend development, adapting easily to different environments and technologies. I'm highly motivated to understand how things work and constantly seeking to learn and improve my skills. I have experience developing microservice-based systems and modern web applications.

# Work Experience

## Autoinspector

### *Junior Fullstack Developer*

November 2021 – November 2022

- Part of an agile development team responsible for maintaining and evolving a system composed of multiple microservices and three web applications: a main customer platform, a landing page, and an internal backoffice tool.
- Worked in a fullstack role, contributing to both frontend and backend, implementing new features and improving existing ones.
- Focused mainly on the backoffice application, developing administrative views with dynamic tables, charts, and forms for managing key business data.
- Collaborated closely with other developers to integrate backend services with user interfaces, ensuring a smooth experience.
- Tech stack:
  - **Frontend:** Next.js, TypeScript
  - **Backend:** NestJS, Node.js, TypeScript, MongoDB, AWS S3, Docker, RabbitMQ

## Education

### Bachelor's Degree in Information Systems

Universidad Nacional de La Plata (UNLP)

2018 – Present

Currently completing 3rd and 4th year subjects in this 5-year program.

### Associate Degree in Information and Communication Technologies

Universidad Nacional de La Plata (UNLP)

2021 – Present

Currently completing 3rd year subjects in this 3-year program.

## Technical Skills

- **Languages:** TypeScript, JavaScript, Python, C++, Java
- **Frontend:** React, Next.js, Astro, Vue.js, TailwindCSS, MaterialUI, HTML, CSS
- **Backend:** Node.js, NestJS, Express, Django, Flask
- **Databases:** MongoDB, MySQL, PostgreSQL
- **DevOps & Tools:** Docker, Git, AWS S3, RabbitMQ
- **Other:**
  - Video game development with Unity

- Mobile app development with React Native
- Object-oriented programming, data structures and algorithms

## Personal & Academic Projects

### Bit by Bit – Programming blog

*Creator – Astro, TailwindCSS*

Website designed to share technical articles and tutorials for beginner programmers. Clean, responsive and fast design built using Astro as a static site generator.

- Includes article search and category system
- [Github](#) | [Website](#)

### AlquilappCar – Vehicle rental platform

*Team contributor – Django, React, SQLite, TailwindCSS*

University group project simulating a car rental system with user authentication, online reservations and an admin dashboard.

- Separated frontend and backend, RESTful API, simulated payment system
- [Github](#)

### Quick QR – Online QR code generator

*Creator – JavaScript, HTML, CSS (vanilla)*

Simple and functional web app that generates a QR code from any user-entered URL. Built entirely with pure web technologies and the `qrcode.min.js` library.

- Minimalist, responsive, and fast interface
- [Github](#) | [Demo](#)

## Languages

- Spanish – Native
- English – Intermediate
